Interactive Plants: Giving Nature a Voice

Daniil Tsimbalyuk - github: lamlel

Yuvaraaj Murthy - github: yuvaraajmurthy

Aarav Nagpal - github :nagpalaarav138-sketch

Konain E Mustafa - github: konainemustafa

Let your plant talk, complain about thirst, and ask for sun. A mobile interface bringing house plants to life.

Generic Care Fails Plants

Species-Specific Needs

- Every species has unique survival needs that standard care templates ignore.
- Beginners struggle with measuring precise soil moisture and light readings.

Static Guidance Gaps

- Generic guides lack real-time environmental context and dynamic feedback.

One-size-fits-all schedules fail to adapt to changing microclimates and seasonal shifts.

Distinct Plant Personalities

Spike the Cactus

Succulent Personality

Low moisture tolerance

Dry humor

Fern the Fern

Tropical Personality

High humidity needs

Dramatic when dry

Sensor-Driven AI Engine

✨ Real-time sensor-driven conversational responses.

Overcoming Hardware and Latency Hurdles

HARDWARE • 01

Sensor Calibration

Filtered electrical noise
for accuracy.

PERFORMANCE • 02

AI Voice Latency

Reduced round-trip time
for responsive chats.

DEPLOYMENT • 03

Mobile Web Optimization

Browser audio streaming
without native apps.

LIVE INTERACTION

Project Demo

Experience the interactive plant personality system in real-time

Hardware to AI Voice Pipeline

End-to-end architecture connecting environmental probes to AI voice and Solana care rewards.

1. Data Ingestion & Storage

Arduino probes stream environmental data to a Go server. Tiger Data stores plant profiles, ideal conditions, and time-series data for future analytics.

2. Voice Streaming & Intelligence

Audio is processed via Gemini Speech-to-Text, then passed to a Gemini model with RAG to generate in-character plant replies based on sensors, and converted to speech via ElevenLabs for a personal feel.

3. Solana Monetization

Built on Solana to monetize care, automatically paying anyone who waters your plant when you are away.

Future Ecosystem Expansion

Comprehensive species database for automatic personality adjustments.

Automated watering hardware integration.

Multi-plant tracking across shared environments.
